

PROJECT PROFILE

PROJECT	System Operating Manuals & Operator Training - Subsea tie-back & onshore separation and water disposal plant
CLIENT	BP for GUPCO
LOCATION	UK & Egypt
VALUE	£220,000

WORKSCOPE

Systems Operations Manuals were developed for the Taurt subsea well tie-back, 70 km pipeline and the fluid reception separation, produced water treatment & disposal and chemical injection facilities located at the West Harbor processing plant in Port Said.

Our operations personnel were approached during a site validation visit and asked whether the company were able to provide assistance for commissioning of the plant and in operator training.

In response we provided senior operations personnel to assist in pipeline dewatering and onshore plant commissioning, and to undertake on-the-job training of nominated site personnel during plant start-up.

Systems Operations Manuals developed included:

- Taurt subsea wells and pipelines
- Fluid reception and separation
- Produced water treatment and disposal
- Chemical injection

Subsequent work scopes included the development of an Integrity Management Scheme for the onshore processing facilities.
